

2- Sheep Unit:

The hangars units of sheep and goats were developed and modernized by constructing umbrellas and barriers in addition to establishing of a specialized sheep milking unit and cheese factory. This was conducted within a model scientific frame in cooperation with the Faculties of Agricultural and Food Sciences and the College of Veterinary Medicine. This unit aims to provide training for various disciplines in addition to create opportunities for different scientific researchers and students to take advantage of these new technologies.

Immunizations conducted in the unit

1. Cut sheep horns and hooves
2. Immunization of foot and mouth disease
3. Injection aevomk solution under the skin
4. Septicemia immunization
5. Copper solution + vitamin E, and selenium injection
6. Shear wool of Naimi and Najdi sheep
7. Intestinal poisoning immunization
