<b>Level</b>	1 <sup>st</sup> Semester		<b>Prerequisite</b>				
<b>Course Description:</b>  At a conceptual level, this course is designed to make the students knowledgeable of the design, implementation, control, evaluation and strategic use of modern information systems. Topics discussed include strategic uses of information systems, information systems in business functions, understanding enterprise systems, data management, basics of data warehousing and knowledge management, managers and their information needs, understanding corporate governance, E-commerce, the internet, intranets & extranets, supply chain management, trustworthy computing, IT security & cryptography, modern IT architectures including utility/service oriented model, web services, B2B and outsourcing, planning & acquisition of IT.							
<b>Course Outcomes:</b> The students will be able to <ul style="list-style-type: none"> <li>• Identify and understand the key components of enterprise systems architecture</li> <li>• Analyze and evaluate management decisions in enterprise systems</li> <li>• Discuss the importance of architecture design for complex information systems</li> <li>• Learn how IT affects management methods and transforms organizational and industry structures.</li> <li>• Describe appropriate processes for the design and implementation of large scale information systems</li> <li>• Make best use of IT in managerial decision making</li> <li>• Discuss future emerging information systems concepts and technology</li> </ul>							
<b>Grading</b>	<input checked="" type="checkbox"/> <b>Mid-term</b>	<b>30%</b>	<input type="checkbox"/> <b>Project</b>		<input checked="" type="checkbox"/> <b>Quizzes</b>	<b>15%</b>

<b>Level</b>	2 <sup>nd</sup> Semester		<b>Prerequisite</b>				
<b>Course Description:</b> <p>“Design Patterns” is a modern classic in the literature of object-oriented development, offering elegant solutions to common problems in software design. This course discusses patterns for managing object creation, composing objects into larger structures, and coordinating control flow between objects. After introducing the students with philosophy and application of design patterns, creational design patterns are discussed. A detailed discussion on structural design patterns is followed by behavioral and concurrency patterns. Case studies are a core part of the course used to demonstrate how design patterns can be used to solve daily life problems.</p>							
<b>Course Outcomes:</b> The students will be able to <ul style="list-style-type: none"> <li>• Familiarize with the state-of-the-art in software engineering and object oriented</li> <li>• Learn capabilities and pitfalls of object-oriented programming</li> <li>• Apply various design patterns for development of object oriented systems</li> <li>• Analyze, design and implement practical systems of average complexity</li> </ul>

<b>Level</b>			<b>Prerequisite</b>	0912610			
<b>Course Description:</b> <p>The security design principles are discussed and applied to eliminate typical vulnerabilities in implementing an information system. An in depth study of several emerging threats is given including next-generation phishing, drive-by-pharming, online extortion, multi-application botnets, crimeware, mobile worms, and VoIP security. Emerging defense techniques are also discussed with all threats. The latest web vulnerabilities covered in this course include client-state manipulation, cookie-based attacks, SQL injection, cross domain attacks (XSS/XSRF/XSSI), and HTTP header injection. Security issues that arise specifically in Web 2.0 applications taking advantage of AJAX, XmlHttpRequest, and mash-ups are discussed. The course also covers Same-Origin-Policy (SOP) violations that can occur due to DNS rebinding, timing, and user tracking attacks.</p>							
<b>Course Outcomes:</b> The students will be able to <ul style="list-style-type: none"> <li>• Learn security design principles and best practices to develop secure information systems</li> <li>• Get a technical walk-through of several emerging threats</li> <li>• Learn emerging defenses that are just on the horizon to mitigate such vulnerabilities</li> <li>• Carry out effective research in the domain of information systems security</li> </ul>

<b>Course Description:</b> <p>This course investigates the tools used by and skills necessary for information systems consultants. The course will provide with knowledge of various phases of consulting life cycle. Students will learn business needs and developing information systems and technology solutions. Students will also learn various consulting tools and techniques to develop consulting. This course requires students to have a desire to expand their backgrounds to meet the growing demands of today's global business environment. The primary intention of this course is to provide solid foundation to become both external and internal consultants in the marketplace. The course will use class lectures followed by team oriented project approach and presentations to share their experience in information systems and consulting.</p>							
<b>Course Outcomes:</b> The students will be able to <ul style="list-style-type: none"> <li>• Understand the role and responsibilities of an IS consultant</li> <li>• Develop skills to have greater impact in order to make better use of specialist or technical knowledge</li> <li>• Gain knowledge for dealing with the real-life hurdles that consultants face and use various professional consulting tools and techniques</li> </ul>

<b>Level</b>			<b>Prerequisite</b>	0912611			
<b>Course Description:</b>  This course provides students with the technical skills required to plan, implement, and maintain a data warehouse using a DBMS such as Oracle Warehouse Builder. Key topics include design a data warehousing system; implement a database designed with a star schema, gather data from primary data sources, transform data, and load data in to a DBMS. Students will create a cube using OLAP and analyze cube data using client applications.							
<b>Course Outcomes:</b> The students will be able to  <ul style="list-style-type: none"> <li>• Get a familiarity with the typical data warehouse components and architecture</li> <li>• Get an understanding of the practical uses of data warehousing</li> <li>• Get knowledge of the theories and principles of data warehousing</li> <li>• Develop an understanding of the techniques and tools used to design a data warehouse</li> <li>• Understand the theory and principles of data warehousing with regard to the practice of decision support</li> </ul>

<b>Level</b>			<b>Prerequisite</b>	0912612			
<b>Course Description:</b> <p>This course covers concepts in Enterprise Resource Planning (ERP). The focus of this course is to show how ERP systems integrate all major business functions (finance, human resources, manufacturing, and inventory etc.) into an enterprise wide shared information systems network. It is also emphasized that by making information available across traditional business unit boundaries, efficiency improves and gives rise to new strategic opportunities. Ultimately, such intranet information systems can be interlinked with other enterprise business partners (e.g. vendors, suppliers, and financial institutions) to form powerful resource planning networks. This course will explore the technology and strategic use of enterprise information systems.</p>							
<b>Course Outcomes:</b> The students will be able to <ul style="list-style-type: none"> <li>• Develop a conceptual understanding of ERP and business process reengineering</li> <li>• Understand ERP implementation life cycle stages and options of various platforms</li> <li>• Understand critical factors guiding selection and evaluation, strategies for ERP systems</li> <li>• Develop strategies for integrating ERP into organizational culture</li> </ul>

<b>Course Description:</b> <p>Businesses of all sizes have desire to obtain a competitive advantage in the development of IT capabilities. The increasing use of technology in businesses has led information security threats and their subsequent audit and control at management level within an organization. This course aims at providing students with an understanding of the threats to information, information systems and imparting an awareness of controls that may be applied to reducing risk from the threats. The students should be able to have an awareness of the importance of good security policy at management level.</p>							
<b>Course Outcomes:</b> The students will be able to <ul style="list-style-type: none"> <li>• Understand the common security threats that threaten information systems in organizations</li> <li>• Analyze and assess the risk exposures of particular assets within organizations</li> <li>• Implement a practical audit strategy to identify, analyze and manage security risks in information systems</li> <li>• Appraise the use of audit techniques to ensure appropriate use of controls</li> </ul>

<b>Level</b>				<b>Prerequisite</b>			
<b>Course Description:</b>  This course will cover traditional material, as well as recent advances in Information Retrieval (IR), the study of indexing, processing, and querying textual data. Basic retrieval models, algorithms, and IR system implementations will be covered. The course will also address more advanced topics in "intelligent" IR, including Natural Language Processing techniques, and "smart" Web agents. Topics: Introduction to IR models and methods, Perl tutorial, Text analysis / Web spidering, Text properties, Vector-based model, Boolean model, Probabilistic model; other IR models, IR evaluation and IR test collections, Relevance feedback, query expansion, Web search: link based and content based, Query-based and content sensitive link analysis, Search engine technologies, Search engine user interfaces, Text classification and clustering.							
<b>Course Outcomes:</b> The students will be able to <ul style="list-style-type: none"> <li>• Get familiar with indexing, processing, and querying textual data</li> <li>• Use basic retrieval models, algorithms, and IR system implementation</li> <li>• Understand advanced topics in intelligent IR, including natural language processing techniques, and smart web agents</li> </ul>

<b>Level</b>			<b>Prerequisite</b>				
<b>Course Description:</b> <p>Interactive multimedia systems are becoming increasingly widespread in many domains including games, arts and business. This subject introduces fundamental principles of interactive multimedia and associated tools. Topics include digital multimedia applications, social and ethical considerations. Enabling technologies such as digital representations, hardware and software requirements, Introduction to computer graphics: vector graphics and bitmapped images, image manipulation and compression, Digitized video standards, video compression, streamed video, video editing and post-production, Captured animation and image sequences, key frame and 3-D animation, Digitized sound, sound compression, sound format, combining sound and picture, hypermedia, synchronization-based presentation, Multimedia and Networks: computer network and transport protocols, multicasting, quality of service, server-side computation, protocols applications.</p>							
<b>Course Outcomes:</b> The students will be able to <ul style="list-style-type: none"> <li>• Get background knowledge of the different components of digital media, text, images, sound &amp; video, their representations and media carriers</li> <li>• Get practical knowledge in processing digital media and integration of its components</li> <li>• Design and program digital media applications</li> <li>• Acquire necessary knowledge to work in a team of digital media designers and developers</li> </ul>

<b>Course Description:</b>  This course introduction to knowledge and knowledge management concepts, and processes in organizations. It also addresses knowledge modeling concepts such as ontologies, structures, relationships, organization modeling, communication, knowledge transfer and total knowledge Management. It addresses knowledge management and knowledge modeling from an information system perspective by focusing on analyzing information and knowledge process in organizations, explicit and implicit tacit knowledge in software systems and in human social systems, languages and models for codifying knowledge. Knowledge modeling, ontology and semantic issues, the knowledge management infrastructure, layers, teams, blueprints and leadership.							
<b>Course Outcomes:</b> The students will be able to <ul style="list-style-type: none"> <li>• Understand the fundamental concepts in the study of knowledge and its creation, acquisition, representation, dissemination, use/re-use, and management</li> <li>• Appreciate the role and use of knowledge in organizations and institutions, and the typical obstacles that KM aims to overcome</li> <li>• Comprehend the core concepts, methods, techniques, and tools for computer support of knowledge management</li> <li>• Apply and integrate appropriate components and functions of various knowledge management systems</li> <li>• Evaluate current trends in knowledge management and their manifestation in business and industry</li> </ul>

<b>Course Description:</b>  The key element of this course is the omnipresence of information devices. These devices can be embedded into cars, airplanes, ships, bikes, posters, signboards, walls and even clothes. This course focuses on independent information devices including wearable computers, mobile phones, smart phones, smart-cards, wireless sensor-compute nodes and the services made available by them. It includes human-computer interaction using several types of elements including sensing, text, speech, handwriting and vision.							
<b>Course Outcomes:</b> The students will be able to <ul style="list-style-type: none"> <li>• Get a sound conceptual foundation in the area of ubiquitous and pervasive computing</li> <li>• Have a balanced treatment of the mechanisms and environments of ubiquitous and pervasive computing</li> <li>• Conceptualize, analyze and design select classes of ubiquitous and pervasive computing systems</li> </ul>

<b>Level</b>				<b>Prerequisite</b>	0912610		
<b>Course Description:</b> The purpose of this course is to provide students with an understanding of the key technical and managerial issues in the effective development and use of decision support systems in organizations. This course provides an overview of the theoretical and practical aspects of decision support systems (DSS). The course consists of three modules. The first module concentrates on the managerial aspects of decision-making, the role of automation in decision making, and decision models. The second module discusses the design and development of decision support systems, with an emphasis on data management. The last module addresses the integration and implementation challenges in Enterprise DSS, intelligent DSS, web-based DSS, as well as their future trends. Tools such as DPL and Expert Choice (an analytic hierarchy process-based DSS engine), and TemTec Executive Viewer (an OLAP), Enterprise Resources Planning can be used.							
<b>Course Outcomes:</b> The students will be able to <ul style="list-style-type: none"> <li>• Get familiar with basic DSS concepts, tools and techniques</li> <li>• Understand the fundamentals of DSS design and development</li> <li>• Distinguish among individual, group and organizational</li> <li>• Comprehend current and future DSS implementation challenges</li> <li>• Gain hands-on experience by developing a small-scale DSS</li> </ul>

<b>Level</b>				<b>Prerequisite</b>	0912612		
<b>Course Description:</b>  This course examines the concepts, theories, and techniques for Web services. Architectures for Web applications based on the classical publish, find, and bind triangle and formulates them at a higher level. It considers sophisticated approaches for the description, discovery, and engagement of Web services by emphasizing Web service composition. Key topics include Web Services Architectures and Standards, Enterprise architectures, service foundations (middleware, service interface, publishing, discovery and binding), service description, modeling, composition, adaptation and representation. Issues related to engagement, collaboration, selection, engineering, semantics, transactions, processes, agents, quality of service, compliance, and trust are also addressed.							
<b>Course Outcomes:</b> The students will be able to <ul style="list-style-type: none"> <li>• Understand advanced concept of information architecture, web-based applications and service oriented computing</li> <li>• Learn concepts necessary to publish, find, and bind architecture for Web services and to use the corresponding standards, in particular, WSDL, SOAP, UDDI</li> <li>• Get an ability to conceptually model Web services and formulate specifications of them in the RDF and OWL</li> <li>• Develop concepts of Web service matchmaking, registration and discovery techniques</li> </ul>

<b>Track</b>	<input checked="" type="checkbox"/> Core <input type="checkbox"/> Elective <input type="checkbox"/> Pre-Requisite			
<b>Level</b>			<b>Prerequisite</b>	Department Approval
<b>Course Description:</b> The Project Proposal emphasizes on application of the theoretical concepts of software analysis and design learned during the course work. The analysis component comprises of preparing formal Software Requirements Specifications (SRS) document including problem statement, scope, justification, requirements, cost estimation, assumptions, limitations, methodology and tools to be used in project development. The assumption should be taken in such a way that scope of the problem becomes clear and well defined in the problem statement. All the functional and non-functional requirements of the system must be identified and analyzed in the proposal. The students will be encouraged to develop/describe logical model of the proposed system based on the requirements. The design component of the course includes prototype including input and output of the proposed system.				
<b>Course Outcomes:</b> At the end of the course, students will be able to <ul style="list-style-type: none"> <li>• Identify and define problem statement</li> <li>• Define and justify scope of the problem</li> <li>• Gather and analyze system requirements</li> <li>• Propose an optimized solution among the existing solutions</li> <li>• Practice software analysis and design techniques learned during the course work</li> <li>• Develop technical report writing and oral presentation skills</li> </ul>

<b>Level</b>	4 <sup>th</sup> Semester		<b>Prerequisite</b>	Project Proposal
<b>Course Description:</b> In this course the students will be required to implement proposed design of the project. The students will review the design specification and make any necessary enhancements to synchronize the implementation details. The students will identify and learn the use of tools required for the project implementation. The students will be expected to: prepare application architecture, code, debug, document, and test the application software within suggested timeframe. A key focus of the course is to emphasize the quality of software project through various evaluation aspects such as professional coding style, documentation of code, intuitive user interface design, input validation, verification and user guide. The students will be further required to evaluate the developed system by generating test cases of the critical components of the designed model.				
<b>Course Outcomes:</b> At the end of the project, students will be able to <ul style="list-style-type: none"> <li>• Develop a functional application based on the software design</li> <li>• Apply the coding, debugging and testing tools to enhance the quality of the software</li> <li>• Construct new software systems based on the theory and practice gained through this exercise</li> <li>• Prepare the proper documentation of software projects following the standard guidelines</li> <li>• Learn technical report and oral presentation skills</li> </ul>

<b>Level</b>	4 <sup>th</sup> Semester	<b>Prerequisite</b>	Department Approval
<b>Course Description:</b> Student will choose a research topic under supervision of a faculty member. After approval of the thesis subject, the student needs to define objectives of the research and prepare the research proposal. In the proposal, he/she will be required to (i) conduct an exhaustive survey (ii) identify and define the problem clearly (iii) decide scope of the problem and provide its assumptions and limitations (iv) ensure the originality of the research proposal (v) suggest the approach and methodology used in the research and (vi) present the expected results. At the successful presentation of the proposal, student will be asked to submit the proposal. The student will apply the proposed methodology to solve the problem. After completion, student will submit the thesis. Then student will defend the thesis.			
<b>Course Outcomes:</b> At the end of the thesis students will be able to <ul style="list-style-type: none"> <li>• Conduct survey of research issues</li> <li>• Practice research techniques, tools and methodologies</li> <li>• Work independently and take initiatives in academic or professional environment</li> <li>• Develop writing and oral presentation skills</li> </ul>
