

## **Intended Learning Outcomes (ILOs) achievements Table**

Department: Mathematics and Statistics

Course name: Statistics and its applications

Course No.:Math374

Course Coordinator: Esam Eldin Ahmed Rakha

Domain	No.	List of course learning outcomes	List of methods of assessments	Summary of analysis of assessment results	Ach. %
Knowledge	1	To know the different appropriate methods for tackling different types of data to obtain different statistical inferences, and measure its goodness or reliability.	-Work together to make sense of new ideas and towards the discovery of solutions.  -Solving problems including both small and large sample size, using computers packages.  -Data analysis for large projects in different fields.  -Preparing both verbal and graphical data reports.	Most of the evaluation (assessments) methods mentioned affected the level of the students by between 80-85 percent	80 - 85 percent
Cognitive Skills	2	To gain relevant Skills for analyzing and generating main ideas.	<ul> <li>Individual project work         <ul> <li>(Home works, Quizzes, Reports)</li> </ul> </li> <li>Group project work.</li> <li>Variations on written examinations.</li> <li>Comprehension tests.</li> <li>Oral examinations.</li> </ul>	Most of the evaluation (assessments) methods mentioned affected the level of the students by between 80-85 percent, even if each of the analyzing & generating skill is the most influential on the level of students.	80-85 percent

## جامعة الملك فيصل كلية العلوم

Domain	No.	List of course learning outcomes	List of methods of assessments	Summary of analysis of assessment results	Ach. %
Interpersonal Skills	3	To use appropriate skills for the thinking interpersonal for manipulating different tasks.	-Individual project work (Home works, Quizzes, Reports, written and oral examinations (One or Two)) to assess the capacity for independent study and the learner ability to:  1. Collect, organize and interpret Univariate numerical data.  2. Represent data effectively, choosing appropriately from.  3. Identify potential sources of bias, errors in measurement, and potential uses and misuses of probability methods.  4. Generalize the fundamental counting principle and solve problems using the fundamental counting principle.  5. Group project work. to assess the learner ability to: 1. Participates as a Member of a Team.  2. Teaches Others New Skills.  3. Exercises Leadership.  4. Negotiates.  5. Works with Diversity.	Most of the evaluation (assessments) methods mentioned affected the level of the students by between 85-90 percent.	85-90 percent

Domain	No.	List of course learning outcomes	List of methods of assessments	Summary of analysis of assessment results	Ach. %
Communication, IT and Numerical skills	5	Numerical skills  To apply appropriate methods for handling data.  Communication skills	<ul> <li>Group project work         <ul> <li>(Home works, Quizzes,</li> <li>Reports).</li> </ul> </li> <li>Variations on written examinations.</li> </ul>	Most of the evaluation (assessments) methods mentioned affected the level of the students by between 85-90 percent, even if the	85-90 percent
		To use relevant skills for communicating statistical concepts for all to understand.	<ul><li>Comprehension tests.</li><li>Oral examinations.</li></ul>	Communication skills are the most influential on the level of students.	
Psychomotor skills	6	To learn about the non-electronic sampling methods (manual questionnaires - personal interviews,).	- Individual project work (non-electronic questionnaires) - Group project work (non-electronic questionnaires)	The two evaluation (assessments) methods mentioned affected the level of the students by between 80-85 percent.	80-85 percent

The table evaluates the achievements of the Intended Learning Outcomes (ILOs) set out in the Course Specification.

Refer to the following points when filling the table:

- In the space of "Summary analysis of assessment" estimate the achievement as a percentage accompanied by a short comment.
- The table should be filled by course coordinator after discussion with course instructors "One table for the course, males and females"
