

Department of Chemical Engineering

The Department of Chemical Engineering at King Faisal University was established in 2011. It is located in oil and gas rich Al-Ahsa region of Kingdom of Saudi Arabia. The Department offers undergraduate degree “Bachelor of Science in Chemical Engineering”. The Department will soon start offering graduate Programs. Currently it is home to 185 undergraduate students and 14 faculty members. The chemical engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>.

Department Mission:

The Chemical Engineering Department is committed to quality education that prepares graduates through a project-based curriculum with broad basic engineering knowledge to be professionals and to pursue postgraduate studies and research in Chemical Engineering. The department is also committed to research that leads to better solutions to Chemical Engineering related problems with emphasis on issues of national significance including, energy, petrochemicals, and environmental issues, by working closely with industry

Program Educational Objectives (PEOs):

Within a few years of graduation, Chemical Engineering graduates are expected to attain the following program educational objectives:

- PEO 1:** Become technically competent engineers for successful and productive careers in the chemical engineering profession.
- PEO 2:** Demonstrate effective leadership skills in a diverse environment.
- PEO 3:** Engage in life-long learning for the purpose of professional development.
- PEO 4:** Pursue graduate studies and research in chemical engineering.

Student Outcomes (SOs):

The graduates of the Chemical Engineering Department, College of Engineering at King Faisal University are expected to demonstrate:

- (1) Ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
- (2) Ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
- (3) Ability to communicate effectively with a range of audiences
- (4) Ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
- (5) Ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
- (6) Ability to develop and conduct appropriate experimentation, analyse, and interpret data, and use engineering judgment to draw conclusions
- (7) Ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Department of Chemical Engineering

The Department of Chemical Engineering has progressed well since its establishment in 2011. The total number of students in the Department has risen steadily since then to the present 185 students currently enrolled in the Program.

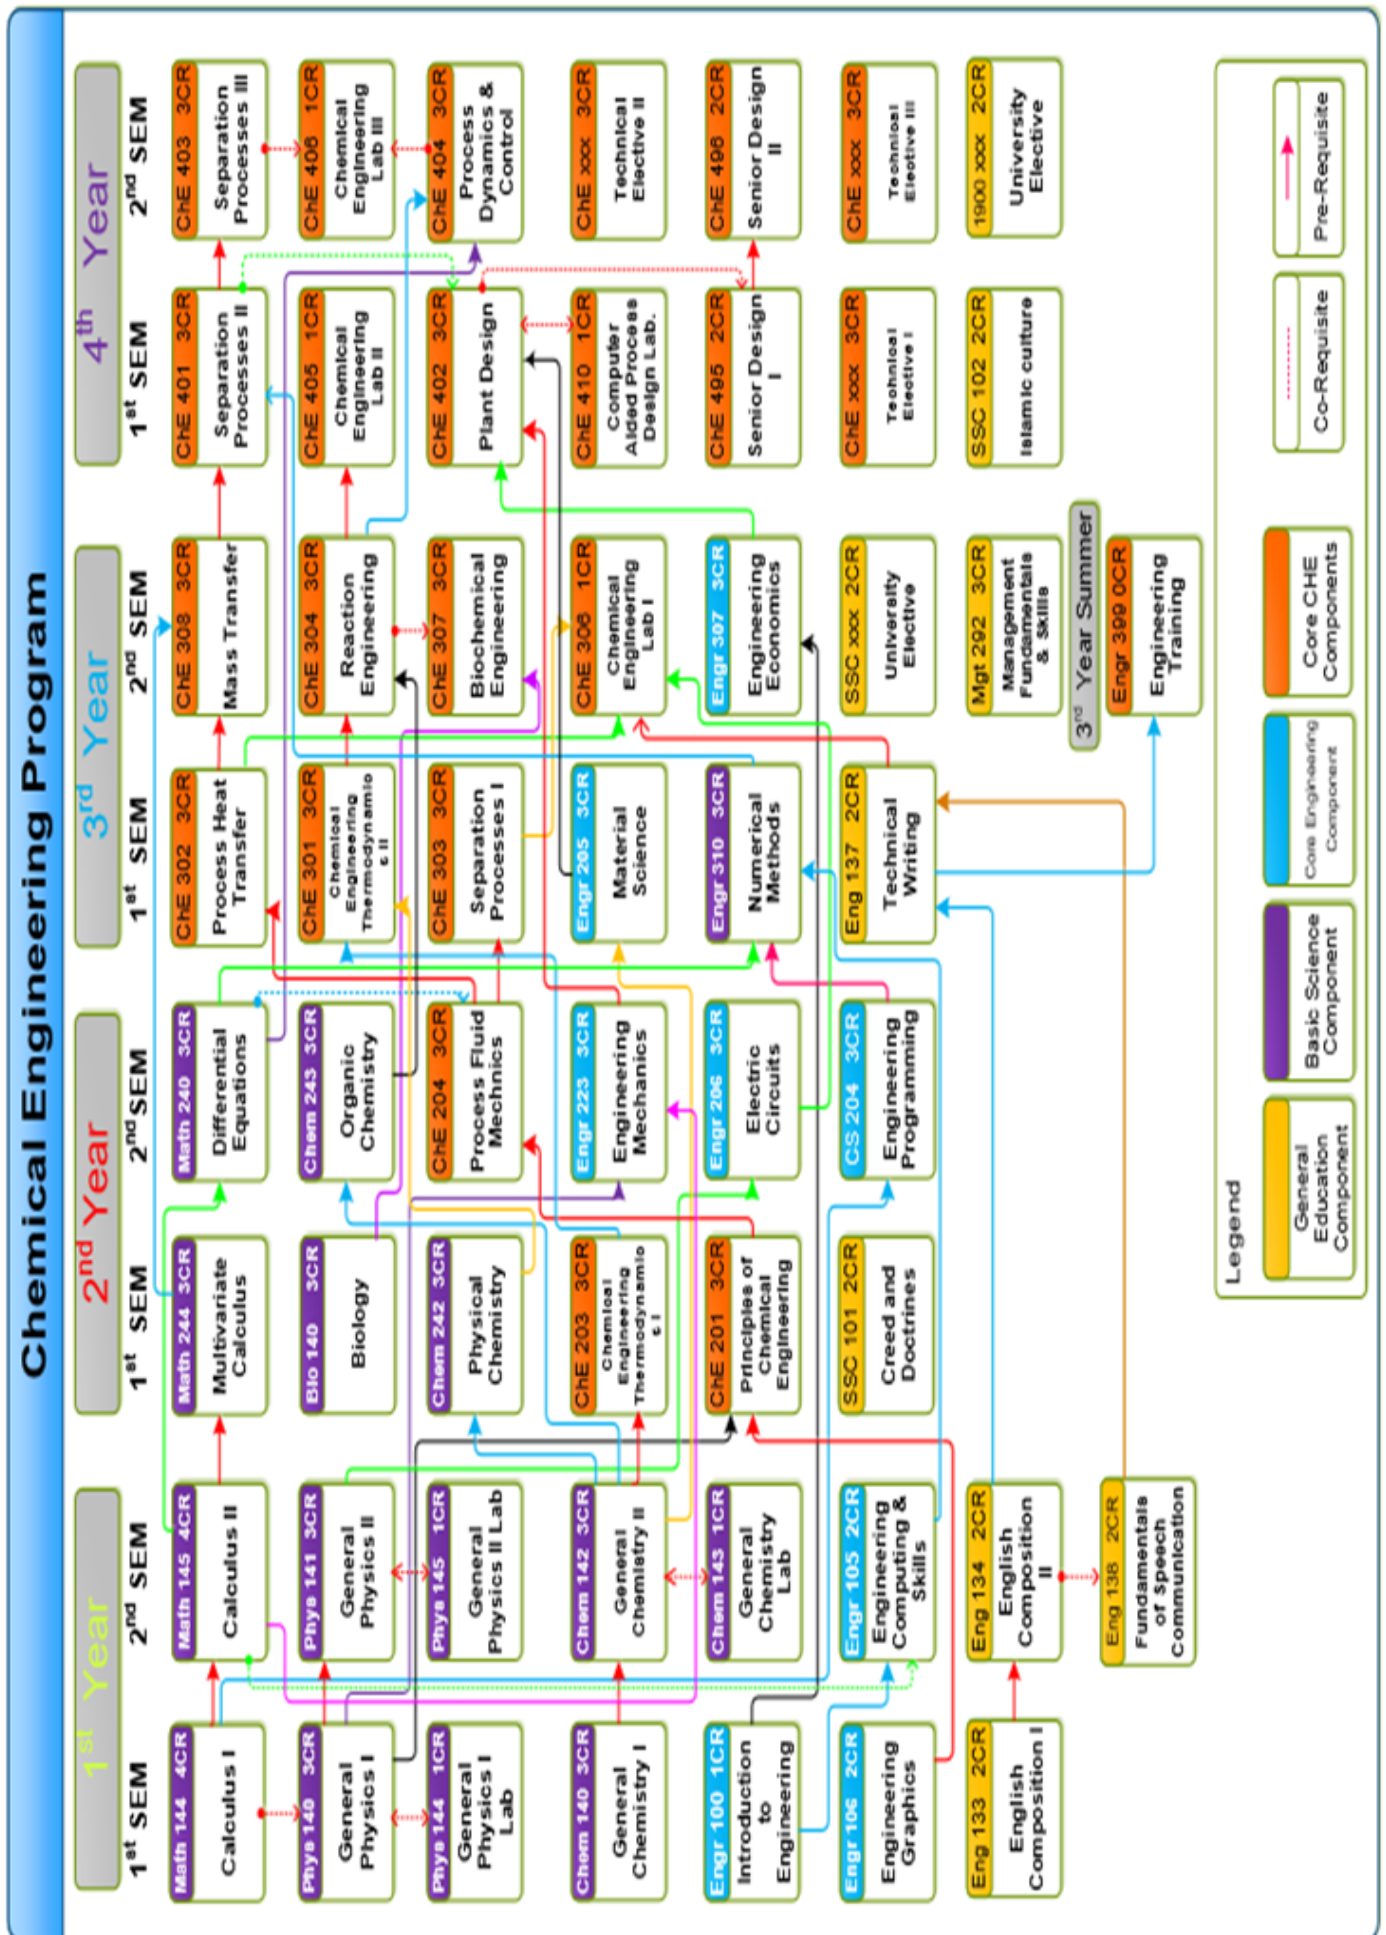

Chemical Engineering Department Facilities

There are eight laboratories, seven experimental labs (Fluid Mechanics Lab., Solid Separation Lab., Heat Transfer Lab., Thermodynamics Lab., Reaction Engineering Lab., Unit Operations Lab., and Process Control Lab.) and one computational lab, for the Chemical Engineering undergraduate program. In addition there is a dedicated research Lab for faculty members.

Flow Chart of the Chemical Engineering Curriculum (BSc Degree)

Study Plan of the Undergraduate Program (BSc Degree)

❶ First Semester					
Course Code	Course Title	CH	Required/ Elective	Pre-& Co- requisite	Curriculum Category
Math 144	Calculus I	4	Required		Math and Basic Sciences
Phys 140	General Physics I	3	Required	C:Math 144 C:Phys 144	Math and Basic Sciences
Phys 144	General Physics I Lab	1	Required		Math and Basic Sciences
Chem 140	General Chemistry I	3	Required		Math and Basic Sciences
Engr 100	Introduction to Engineering	1	Required		General Engineering
Engr 106	Engineering Graphics	2	Required		General Engineering
Eng 133	English Composition I	2	Required		Broad Education
Semester Credit Hours				16	

❷ Second Semester					
Course Code	Course Title	CH	Required/ Elective	Pre-& Co- requisite	Curriculum Category
Math 145	Calculus II	4	Required	P: Math 144	Math and Basic Sciences
Phys 141	General Physics II	3	Required	P:Phys 140 C:Phys 145	Math and Basic Sciences
Phys 145	General Physics II Lab	1	Required	C: Phys 141	Math and Basic Sciences
Chem 142	General Chemistry II	3	Required	P:Chem 140 C:Chem 143	Math and Basic Sciences
Chem 143	General Chemistry Lab	1	Required	C:Chem 142	Math and Basic Sciences
Engr 105	Engineering Computing & Skills	2	Required	P:Engr 100 C:Math 145	General Engineering
Eng 134	English Composition II	2	Required	P: Eng 133	Broad Education
Eng 138	Fundamentals of Speech Communication	2	Required	C: Eng 134	Broad Education
Semester Credit Hours				18	

❸ Third Semester					
Course Code	Course Title	CH	Required/ Elective	Pre-& Co- requisite	Curriculum Category
Bio 140	Biology	3	Required		Math and Basic Sciences
Math 244	Multivariate Calculus	3	Required	P: Math 145	Math and Basic Sciences
ChE 201	Principles of Chemical Engineering	3	Required	P:Phys 140 P:Engr 106	Core Chemical Engineering
Chem 242	Physical Chemistry	3	Required	P:Chem 142	Math and Basic Sciences
ChE 203	Chemical Engineering Thermodynamics I	3	Required	P:Chem 142	Core Chemical Engineering
SSC 101	Creed and doctrines	2	Required		Broad Education
Semester Credit Hours				17	

④ Fourth Semester					
Course Code	Course Title	CH	Required/ Elective	Pre-& Co- requisite	Curriculum Category
Math 240	Differential Equations	3	Required	P: Math 145	Math and Basic Sciences
Chem 243	Organic Chemistry	3	Required	P: Chem 142	Math and Basic Sciences
ChE 204	Process Fluid Mechanics	3	Required	P:ChE 201 C:Math 240	Core
Engr 223	Engineering Mechanics	3	Required	P:Math 144 P:Phys 144	General Engineering
Engr 206	Electric Circuits	3	Required	P: Phys 141	General Engineering
CS 204	Engineering Programming	3	Required	P:Math 144	General Engineering
Semester Credit Hours			18		

⑤ Fifth Semester					
Course Code	Course Title	CH	Required/ Elective	Pre-& Co- requisite	Curriculum Category
ChE 302	Process Heat Transfer	3	Required	P: ChE 204	Core Chemical Engineering
ChE 301	Chemical Engineering Thermodynamics II	3	Required	P:ChE 203 C:Chem 242	Core Chemical Engineering
ChE 303	Separation Processes I	3	Required	P: ChE 204	Core Chemical Engineering
Engr 205	Materials Science	3	Required	P: Chem 142	Math and Basic Sciences
Engr 310	Numerical Methods	3	Required	P:Math 240, P: CS 204, P: Engr 105	General Engineering
Eng 137	Technical Writing	2	Required	P:Eng 134 P:Eng 138	Broad Education
Semester Credit Hours			17		

⑥ Sixth Semester					
Course Code	Course Title	CH	Required/ Elective	Pre-& Co- requisite	Curriculum Category
ChE 308	Mass Transfer	3	Required	P:ChE 302 P:Math 244	Core Chemical Engineering
ChE 304	Reaction Engineering	3	Required	P:ChE 301 C:Chem 243	Core Chemical Engineering
ChE 307	Biochemical Engineering	3	Required	P:Bio 140 C:ChE 304	Core Chemical Engineering
ChE 306	Chemical Engineering Lab I	1	Required	P:ChE 302 P:ChE 303 P: Engr 206 P: Eng 137	Core Chemical Engineering
Engr 307	Engineering Economics	3	Required	P:Engr 100	General Engineering
SSC xxx	University Elective I	2	Required		Broad Education
Mgt 292	Management Fundamentals & Skills	3	Required		Broad Education
Semester Credit Hours			18		

Summer Semester					
Course Code	Course Title	CH	Required/ Elective	Pre- & Co- requisite	Curriculum Category
Engr 399	Engineering Training	0	Required	P: Senior Standing P:Eng 137	Core Chemical Engineering
Semester Credit Hours			0		

7 Seventh Semester					
Course Code	Course Title	CH	Required/ Elective	Pre- & Co- requisite	Curriculum Category
ChE 401	Separation Processes II	3	Required	P:ChE 308 C:Engr 310	Core Chemical Engineering
ChE 402	Plant Design	3	Required	P:Engr 223, P: Engr 307 P:Engr 205 P: ChE 401 C:ChE 410	Core Chemical Engineering
ChE 405	Chem. Eng. Lab. II	1	Required	P: ChE 304	Core
ChE 410	Computer-Aided Process Design Lab.	1	Required	C: ChE 402	Core
ChE xxx	Technical Elective I	3	Required		Elective
ChE 495	Senior Design I	2	Required	P:Senior Standing C: ChE 402	Core Chemical Engineering
SSC 102	Islamic Culture	2	Required		Broad Education
Semester Credit Hours			15		

8 Eighth Semester					
Course Code	Course Title	CH	Required/ Elective	Pre- & Co- requisite	Curriculum Category
ChE 403	Separation Processes III	3	Required	P: ChE 401	Core Chemical Engineering
ChE 406	Chemical Engineering Lab III	1	Required	C:ChE 403 C:ChE 304	Core Chemical Engineering
ChE 404	Process Dynamics & Control	3	Required	P:Math 240 P:ChE 304	Core Chemical Engineering
ChE xxx	Technical Elective II	3	Required		Elective Chemical Engineering
ChE 496	Senior Design II	2	Required	P: ChE 495	Core Chemical Engineering
ChE xxx	Technical Elective III	3	Required	P:Eng 134 C:Eng 138	Elective Chemical Engineering
SSC xxx	University Elective II	2	Required		Broad Education
Semester Credit Hours			17		

Total Credit Hours of the Program	136

Course Descriptions (Catalogue)

Math 144–Calculus I 4(4-0-0): This is an introductory course of mathematics for college of engineering students. The course covers the basic concepts and methods of calculus. At the beginning of the course the instructor will provide students the knowledge of the number systems, algebraic operations and functions of single variable with domain and range so that students can learn differentiation of the functions. The main topics to be covered in this course include: Limits, Continuity, Differentiation of functions of a single variable, Exponential, Logarithmic, Trigonometric, Inverse trigonometric functions, Applications of derivatives, Differentials, Curve Sketching, L'Hopital Rule, Mean value theorems, Area and estimating with finite sums, Introduction to integrals and definite integrals. **Four 1-hour lectures per week.** Co-requisite: None.

Math 145–Calculus II 4(4-0-0): This is an intermediate level calculus course designed for undergraduate Engineering students. This course covers mainly the integration and basic principles of Vectors and their applications. At the beginning of this course, the instructor will give the review of differentiation and integration. In depth, the students will learn the methods of integration and vectors. The topic covered include, Techniques of Integration, Improper Integration, Applications of Integration, Infinite Sequences and Series, (Power series and Taylor series), Polar coordinates, Transcendental Functions, Vectors, Vector Valued Functions. **Four 1-hour lectures per week.** Pre-requisite: Math 144.

Math 240–Differential Equations 3(3-0-0): This course is an introductory course of differential equations for college of engineering students. The course covers different methods and concepts to solve first and second order differential equations. At the beginning of the course we discuss some definitions and terminology about differential equations. Then we move to solving first and second order differential equations. The topics in this course include, linear differential equations, solving first order differential equations, solving second order differential equations, series solutions of second order linear differential equations, solving systems of linear differential equations, Laplace transform and its applications in solving differential equations. **Three 1-hour lectures per week.** Pre-requisite: Math 145.

Math 244–Multivariate Calculus 3(3-0-0): This course is an advanced course in calculus, designed for undergraduate students of engineering. The course covers the basic principles and methods of differentiation and integration of two or more variables. At the beginning of the course, the Instructor will give a review of functions of one variable and its differentiation and integration. Then, the functions of two or more variables with domain and range will be discussed. Throughout the course, the following main topics will be covered: solid analytic geometry; vector calculus; partial derivative; and multiple integrals. The coverage will also include relevant and important applications in the sciences and engineering. **Three 1-hour lectures per week.** Pre-requisite: Math 145.

Phys 140–General Physics I 3(3-0-0): The course is an introduction to units, measurements, motion in one and two dimensions, kinematics and dynamics, Newton's laws, work and energy, rotational dynamics, linear and angular momentum, torque, and collisions. Basic calculus and multi-variable algebra will be used. **Three 1-hour lectures per week.** Co-requisite: Math 144 & Phys 144.

Phys 141–General Physics II 3(3-0-0): This course introduces students to the physics of electricity and magnetism and the connections between them. The concepts of electric charge,

electric field, electric potential, Kirchhoff Law, Gauss Law, electric and magnetic fluxes, capacitance, resistivity and resistance, connections in series and in parallel, RC-circuit, magnetic field, magnetic force, magnetic and electric torques, Ampere Law, electromagnetic induction, and Faraday Law and Lenz Law will be taught. **Three 1-hour lectures per week.** Pre-requisite: Phys 140. Co-requisite: Phys 145.

Phys 144–General Physics I Lab. 1(0-0-3): Measure basic constants such as length, weight and time, value of acceleration due to gravity. Design and conduct experiments in mechanics. Analyze and interpret experiment data. Write a scientific report. Draw and interpret a graph. Apply experimental principles and error calculations to mechanics. **Three hours Lab. per week.** Co-requisite: Phys 140.

Phys 145–General Physics II Lab. 1(0-0-3): This course introduces students to the basic electrical measurements' techniques and to the physics of electricity and magnetism. The concepts of basic measurements, Resistors in series and in parallel, Verifying Ohm's law, Wheatstone Bridge, Verifying Kirchhoff's Laws, Resistivity, Capacitors in series and in parallel, RC circuit, Introduction to Oscilloscope, the Mechanical Equivalent of Heat, the Negative Temperature Coefficient of Resistance (Thermistor), Galvanometer, and the Magnetic Moment will be taught. **Three hours Lab. per week.** Co-requisite: Phys 141.

Chem 140–General Chemistry I 3(3-0-0): Matter properties and measurement, Atoms and the Atomic Theory, Chemical Compounds, Chemical Reactions, Reactions in Aqueous Solutions, Liquids Solids and Intermolecular Forces, Electrons in Atoms, Periodic Table and Atomic Properties, Chemical Bonding, Valence-Bond, Hybridization of Atomic Orbital, Multiple Covalent Bonds, Molecular Orbital Theory, Liquids and Solids. **Three 1-hour lectures per week.** Co-requisite: None.

Chem 142–General Chemistry II 3(3-0-0): Properties of Gases: Kinetic-molecular theory of gases, Ideal gas law, Mixtures of gases, Thermo- chemistry, Principles of Chemical Equilibrium, Acids and Bases, Buffer Solutions, Neutralization Reactions and Titration Curves, Solubility and Complex-Ion Equilibria, Spontaneous Change: Entropy and Free Energy, Thermodynamic, Solutions and Their Physical Properties, Chemical Kinetics and Electrochemistry. **Three 1-hour lectures per week.** Pre-requisite: Chem 140. Co-requisite: Chem 143.

Chem 143–General Chemistry Lab. 1(0-0-3): Laboratory safety rules and Evaluation of analytical data, Definition and determination of density, explanation and determination of specific heat, concept of Acids, bases and Heat of Neutralization Reaction and its determination, reversible reactions, concept of equilibrium constant and its determination, LeChâtelier principle and its verification, principle involved in Acid base titrations, indicators, Ionization of electrolytes, determination of dissociation constant of weak acid(K_a), principle involved in complex metric titrations, hardness of water and its determination. **Three hours Lab. per week.** Co-requisite: Chem 142.

Chem 242–Physical Chemistry 3(3-0-0): Molecular kinetic theory of gases, First law of thermodynamics, Thermo chemistry, Second and third laws of thermodynamics, Free energies, Phases and solutions, Phase Equilibrium, Chemical equilibrium, Surface Chemistry. **Three 1-hour lectures per week.** **Three 1-hour lectures per week.** Prerequisite(s): Chem 142.

Chem 243–Organic Chemistry 3(3-0-0): Introduction, nomenclature of organic compounds, chemical bonding, isomers, aromatic and aliphatic hydrocarbons, olefins, acetylenes, cycloalkanes, stereoisomers, halogenated organic compounds, reactions of free radicals, alcohols, ethers, epoxides, thiols, sulfides, synthetic polymers. **Three 1-hour lectures per week. Prerequisite(s): Chem 142.**

Bio 140–Biology 3(3-0-0): The course is designed to enhance students' knowledge to understand basic biological processes including the followings: The energy in the cellular work, Cellular respiration, Photosynthesis, Cell reproduction, various pattern of inheritance, DNA replication, Gene Regulation, DNA Technology and Evolution. **Three 1-hour lectures per week. Pre-requisite: None.**

Engr 100-Introduction To Engineering 1(1-0-0): This course introduces engineering to students, particularly those who are interested in an engineering profession. It covers engineering ethics, teamwork, communication skills, engineering topics, and engineering problem solving skills and design methodology. **One 1-lecture per week. Co-requisite: None.**

Engr 105-Engineering Computing & Skills 2(2-0-0): Problem solving skills and computing using MATLAB. **Two 1-hour lectures per week. Pre-requisite: Engr 100. Co-requisite: Math 145.**

Engr 106–Engineering Graphics 2(1-0-3): An introductory course in engineering graphics focuses on graphical communication. Topics include descriptive geometry elements, visualization, engineering drawing techniques, orthographic projection, pictorial representation, section views, and basic dimensioning. The course incorporates computer aided drafting (CAD) with engineering applications using 2-D drawing. This course is divided in to two sections: sketching and AutoCAD. The course begins by teaching the basics of engineering graphics using sketching. Freehand sketching using only a pencil and paper is an important skill for any engineer. It is a means of quickly conveying technical information to others. Through sketching the concepts of pictorial projections, section views, auxiliary views and dimensioning are taught. Once the foundation of engineering graphics is known, these concepts can be applied using computer aided design (CAD) software. AutoCAD is taught first. AutoCAD is a drawing software package used to create two dimensional engineering drawings. **One 2-hours lecture per week. Co-requisite: None.**

Engr 205-Material Science 3(3-0-0): Mechanical, electrical and chemical properties of engineering materials, fundamentals of crystallography, crystal defects, Impurities and imperfections in solids. Atomic diffusion. Single phase metals and alloys; elastic and plastic deformation, recrystallization and grain growth. Multi-phase materials: phase diagrams and equilibrium microstructural development, Heat treatment process, Studies of the widely-used engineering metals, alloys, polymers, composites & ceramics. **Three 1-hour lectures per week. Prerequisite(s): Chem 142.**

Engr 206-Electric Circuits 3(3-0-0): Resistors, capacitors, inductors, currents; voltages; power and energy; circuit analysis techniques; DC and AC analysis; magnetic circuits and transformers; Introduction to DC and AC machines. **Three 1-hour lectures per week. Pre-requisite: Phys 141.**

Engr 223-Engineering Mechanics 3(3-0-0): Engineering Mechanics, covering both statics and dynamics. Topics include vector algebra, force systems, free-body diagrams,

equilibrium of particles and rigid bodies, kinematics of particles and rigid bodies, Newton's laws applied to particles and rigid bodies, friction. **Three 1-hour lectures per week. Prerequisite(s): Math 145 & Phys 140. Co-requisite(s): None.**

CS 204–Engineering Programming 3(3-0-0): Introduction to computer systems; problem solving methodology; testing and debugging of programs; variables, declarations, and assignments; input and output; data types; control flow and looping; functions and overloading; streams and input/output; one-dimensional arrays; two-dimensional arrays; pointers and dynamic arrays; structures; abstract data types and classes; inheritance; friends, overloaded operators, and arrays in classes; recursive functions.. Projects that will require lab work will be assigned weekly. **Three 1-hour lectures per week. Prerequisite: Math 144.**

Engr 307–Engineering Economics 3(3-0-0): The course covers the following topics: Engineering Economic Decisions; Understanding Financial Statements; Cost Concepts and Behaviors; Time is Money; Understanding Money and Its Management; Principles of Investing; Present Worth Analysis; Annual Equivalent Worth Analysis; Rate of Return Analysis; Depreciation; Taxes; Break-Even Analysis, Cost Estimation; Developing Project Cash Flows; Inflation; Replacement Decisions. **Three 1-hour lectures per week. Prerequisite(s): Engr 100.**

Engr 310-Numerical Methods 3(3-0-0): Introduction to Numerical Methods, Solution of Nonlinear Equations, Solution of Simultaneous Linear Algebraic Equations, Solution of Matrix Eigenvalue Problem, Curve Fitting and Interpolation, Numerical Differentiation, Numerical Integration, Ordinary Differential Equations: Initial-Value Problems, Ordinary Differential Equations: Boundary-Value Problems. **Three 1-hour lectures per week. Prerequisite: Math 240, CS 204 & Engr 105.**

Engr 399-Engineering Training 0(0-0-0): All engineering students are required to undergo a comprehensive "Engineering Training Program" with a reputable and specialized industrial firm. The firm can be in or outside Saudi Arabia relevant to his major area of interest in engineering analysis, design, or construction. The main purpose of this summer training is to enhance the students' practical experience and career abilities. Also, it deepens their engineering knowledge acquired during their academic years in the field of practical experience in real-life engineering projects. Additionally, such a program improves the relationship between the College of Engineering and the governmental and private industrial firms. Also, it can provide the industry with well-trained professionals in the near future. The qualifying student should spend at least eight weeks in a governmental organization, a reputable industrial firm, or a research center that is involved with engineering activities. **Two months of full time training. Pre-requisite: Senior Standing & Eng 137.**

ChE 201-Principles of Chemical Engineering 3(3-0-0): Use of basic mathematical concepts, physical laws, stoichiometry, and the thermodynamic properties of matter to obtain material and energy balances for steady and unsteady state systems including those with chemical reaction. **Three 1-hour lectures per week. Prerequisite(s): Phys 140 & Engr 106.**

- ChE 203-Chemical Engineering Thermodynamics I 3(3-0-0):** Thermodynamics concepts and definitions (states, properties, systems, control volume, processes, cycles, units, tables of properties), work and heat, first law, internal energy and enthalpy, conservation of mass, steady-state and uniform state processes, second law, reversible processes, entropy, Clausius inequality, principle of the increase of entropy, efficiencies, irreversibility and availability, power and refrigeration cycles. **Three 1-hour lectures per week.** Prerequisite(s): Chem 142.
- ChE 204-Process Fluid Mechanics 3(3-0-0):** Fluid statics, continuity equation, Bernoulli's equation, and flow measuring devices, fluid friction of flowing systems, momentum balance, pump types and pump performance curves. **Three 1-hour lectures per week.** Prerequisite(s): ChE 201. Co-requisite(s): Math 240.
- ChE 301-Chemical Engineering Thermodynamics II 3(3-0-0):** Properties of ideal and non-ideal vapors and liquids, ideal and non-ideal vapor-liquid equilibria, ideal and non-ideal liquid-liquid equilibria, equilibria of chemical reaction systems, electrolytic solutions, surface thermodynamics, solid phase thermodynamics. **Three 1-hour lectures per week.** Prerequisite(s): ChE 203 & Chem 242.
- ChE 302-Process Heat Transfer 3(3-0-0):** Modes of heat transfer, steady-state heat conduction, unsteady-state heat conduction, principles of convection, natural and forced convection, radiation heat transfer, boiling and condensation and design of heat exchangers and heat transfer equipment. **Three 1-hour lectures per week.** Prerequisite(s): ChE 204.
- ChE 303-Separation Processes I 3(3-0-0):** Analysis and design of unit operations involving: particulate solids handling and storage, screening and classification, size reduction processes, filtration, settling, centrifugation and fluidization. **Three 1-hour lectures per week.** Prerequisite(s): ChE 204.
- ChE 305-Chemical Process Industries 3(3-0-0):** Fundamentals of chemical industries, water treatment, industrial gases; inorganic acids, petroleum and petrochemicals, ceramic, cement and glass industries; fertilizers industries; oil and fat, soap and detergents; pigments and surface coating industries. **Three 1-hour lectures per week.** Prerequisite(s): Chem 243.
- ChE 308-Mass Transfer 3(3-0-0):** Molecular diffusion, unsteady state mass transfer, mass transfer coefficients, mass transfer across interfaces, and analogy between momentum, heat and mass transfer, mass transfer between phases, membrane separation. **Three 1-hour lectures per week.** Prerequisite(s): ChE 302 & Math 244.
- ChE 304-Reaction Engineering 3(3-0-0):** Rate laws and stoichiometry, kinetics and mechanisms of homogeneous and heterogeneous reactions, analysis of kinetics data, design of ideal isothermal and no isothermal reactors. **Three 1-hour lectures per week.** Prerequisite(s): ChE 301 & Chem 243.
- ChE 307-Biochemical Engineering 3(3-0-0):** Introduction to the basic concepts of biochemical engineering; application of chemical engineering skills to the analysis, design, and mitigation of hazards of biologically based processes; kinetics, heat and mass transfer, and thermodynamics as they apply to enzyme catalysis, microbial growth, bioreactor design, and product recovery and safety. **Three 1-hour lectures per week.** Prerequisite(s): Bio 140. Co-requisite(s): ChE 304.
- ChE 401-Separation Processes II 3(3-0-0):** Fundamentals & design-related issues of the following separation techniques: absorption, stripping, binary & multi-component distillation, liquid-liquid extraction, and leaching. **Three 1-hour lectures per week.** Prerequisite(s): ChE 308 & Engr 310.
- ChE 402-Plant Design 3(3-0-0):** Design of chemical processes including process flow sheet preparation, equipment selection and design, materials of construction and corrosion, utilities, plant location and plant layout, process economics, profitability analysis, optimum operating conditions, computer aided design, design optimization, health, safety and environment aspects. **Three 1-hour lectures per week.** Prerequisite(s): Engr 307, Engr 205 & Engr 223. Co-requisite(s): ChE 401 & ChE 410.
- ChE 403-Separation Processes III 3(3-0-0):** Evaporation, humidification and dehumidification, drying, adsorption, crystallization. **Three 1-hour lectures per week.** Prerequisite(s): ChE 401.
- ChE 404-Process Dynamics & Control 3(3-0-0):** Introduction to control systems, modeling of steady and unsteady-state behavior of chemical processes, transfer functions, dynamic behavior of first and second order systems, basic components of control systems, design and analysis of feedback control systems related to chemical engineering processes. **Three 1-hour lectures per week.** Prerequisite(s): Math 240 & ChE 304.
- ChE 405-Chemical Engineering Lab II 1(0-0-3):** Experiments selected from reaction engineering and thermodynamics courses. **Three hours Lab. per week.** Prerequisite(s): ChE 304.
- ChE 406-Chemical Engineering Lab III 1(0-0-3):** Selected experiments from separation processes II, separation processes III and process dynamics and control courses. **Three hours Lab. per week.** Co-requisite(s): ChE 403 & ChE 404.
- ChE 407-Chemical Engineering Optimization 3(3-0-0):** Survey of continuous optimization problems, structure and formulation of optimization problems in chemical engineering, unconstrained optimization problems, linear programming, introduction to constrained optimization, solution of constrained optimization problems, selected applications in chemical engineering, software packages in optimization. **Three 1-hour lectures per week.** Prerequisite(s): Math 310.
- ChE 408-Chemical Process Safety 3(3-0-0):** Hazards of fire and explosions, effects of toxic materials on human and its control, local and international codes and regulations, handling and disposal of hazardous materials, hazard identification and risk assessment from process industries, safety procedures for process industries, emergency plans. **Three 1-hour lectures per week.** Prerequisite(s): ChE 304.
- ChE 420-Experimental Design and Data Analysis 3(3-0-0):** Review of statistical distributions, simple comparative experiments, experiments with a single factor, analysis of variance, randomized blocks, Latin squares and related designs, incomplete block designs, factorial designs, two-level fraction factorial designs, multi-factor experiment and nested designs. **Three 1-hour lectures per week.** Prerequisite(s): Engr 310.

ChE 421-Corrosion Engineering 3(3-0-0): Electrochemical and metallurgical aspects of corrosion, forms of corrosion, modern theory of corrosion and its application, iron and steel corrosion, corrosion prevention, case studies. **Three 1-hour lectures per week. Prerequisite(s): Engr 205.**

ChE 430-Polymer Engineering 3(3-0-0): Definition of polymers, classification of polymers, effect of chemical structure on polymer properties, microstructure of polymers: crystallinity, orientation, molecular conformation, relation between microstructure and physical properties of polymers, polymerization methods, polymerization techniques, molecular weight characterization, polymer processing: extrusion, injection molding, blow molding, thermoforming, film blowing. **Three 1-hour lectures per week. Prerequisite(s): Chem 243.**

ChE 431-Natural Gas Engineering 3(3-0-0): Current and prospective energy situation, sources of natural gas, characterization of natural gas; Exploration and production of natural gas; Design and operations of systems related to the hydrocarbon gases and liquids for industrial and commercial applications; Unit operations of gas processing including compression, transportation, acid gas removal, gas liquefaction, and cryogenic distillation, concentration of their components by absorption and fractionalization procedures; Gas processing products and economics, conversion of natural gas; Use of computer aided design and economic evaluation of natural gas equipment and facility designs. **Three 1-hour lectures per week. Prerequisite(s): Chem 243.**

ChE 432-Petroleum Refining Engineering 3(3-0-0): Origin, occurrence and constituents of petroleum, crude oil analysis; Petroleum products and their uses; Crude oil distillation; Chemical reactions and refinery operations of delayed coking, catalytic reforming and isomerization, catalytic cracking, hydrotreating, catalytic hydrocracking, alkylation; Product blending and production of lubricating oil; Asphalt technology. **Three 1-hour lectures per week. Prerequisite(s): Chem 243.**

ChE 433-Petrochemical Industries 3(3-0-0): Physical and chemical properties of raw materials, processes used in the manufacture of petroleum-based chemicals; Application of scientific and engineering principles involved in the production of hydrogen, alcohols, olefins; Aromatics, aldehydes, ketones, acids, rubber, and other polymers. **Three lectures per week. Prerequisite(s): Chem 243.**

ChE 441- Introduction to Environmental Engineering 3(3-0-0): Concepts and terminology; Sources and impacts of water pollutants; Conventional water and wastewater treatment processes; Sources and impacts of air pollutants; Air pollution control through gas cleaning devices; Solid waste classification, handling and ultimate disposal. **Three 1-hour lectures per week. Prerequisite(s): ChE 303.**

ChE 442-Industrial Water Treatment 3(3-0-0): Water sources, impurities and chemistry; External treatment; Boiler water systems; Cooling water systems; Pretreatment of cooling water systems; Control of corrosion, deposits and scale. **Three 1-hour lectures per week. Prerequisite(s): ChE 303.**

ChE 443-Industrial Wastewater Treatment 3(3-0-0): Sources, characteristics and treatment techniques for wastewater generated from various industrial categories. **Three 1-hour lectures per week. Prerequisite(s): ChE 303.**

ChE 444-Water Desalination 3(3-0-0): Water sources and characterization, water chemistry, water treatment processes; Scale formation problems and pretreatment requirements; Desalination processes: thermal desalination processes, membrane processes; Post treatment of product water. **Three 1-hour lectures per week. Prerequisite(s): ChE 308.**

ChE 452-Air Pollution and Control 3(3-0-0): Economic, social and health implications of air pollution; Air pollution case studies; Methods of air pollution control and design techniques; Sources, types and characteristics of air pollution; Air quality standards and other legislation containing air pollution; Types of air pollution; Environmental regulations for air pollution; Engineering alternatives for air pollution control. **Three 1-hour lectures per week. Prerequisite(s): ChE 303.**

ChE 481-Undergraduate Research I 3(3-0-0): This course is designed to enhance an undergraduate curriculum in chemical engineering by providing students with the opportunity to engage in research activities. Requires progress reports and a comprehensive written report. **Three 1-hour lectures per week. Prerequisite(s): Senior Standing.**

ChE 482-Undergraduate Research II 3(3-0-0): This course is designed to enhance an undergraduate curriculum in chemical engineering by providing students with the opportunity to engage in research activities. Requires progress reports and a comprehensive written report. **Three 1-hour lectures per week. Prerequisite(s): Senior Standing.**

ChE 483-Special Topics I 3(3-0-0): The course covers special topics in an area of chemical engineering. Given on demand. **Three 1-hour lectures per week. Prerequisite(s): Senior Standing.**

ChE 484-Special Topics II 3(3-0-0): The course covers special topics in an area of chemical engineering. Given on demand. **Three 1-hour lectures per week. Prerequisite(s): Senior Standing.**

ChE 495- Senior Design I 2(2-0-0): The first course of a two-semester sequence of senior capstone design. Each group selects a project under the supervision of a faculty member and makes literature review, process selection, plant capacity determination, and mass and energy balances. They will prepare and submit a formal report and make public presentation. **Two 1-hour lectures per week. Prerequisite(s): Senior Standing. Co-requisite(s): ChE 402.**

ChE 496- Senior Design II 2(2-0-0): This is the second course of a two-semester sequence of senior capstone design. It provides students with experience in the process and practice of a chemical component/system design from concept through final design and implementation. Emphasis is on teamwork, project management, testing through simulation, oral and written communications. **Two 1-hour lectures per week. Prerequisite(s): ChE 495.**

Eng 133-English Composition I 2(2-0-0): This is an intermediate level writing class. Students are guided through the stages of the writing process to write paragraphs that are both meaningful and organized and include a topic sentence with a controlling idea and conclusion. Students write multi-draft compositions from a variety of practical and academic purposes. They improve their writing by studying model sentences and paragraphs, basic sentence patterns, mechanics, coordinating conjunctions, transitions and vocabulary. **Two 1-hour lectures per week. Prerequisite: None.**

Eng 134–English Composition II 2(2,0,0): This English course is designed to take learners from the paragraph level of writing in English to the Essay level. It concentrates of the essential form and function of the essay and prepares the ground for the academic essay. Particular importance is given to tasks of description and argumentation, including work on comparison, definition, cause-effect and expression of opinion in essay writing. Thus, students are taken through the major stages of the essay composition process. **Two 1-hour lectures per week. Pre-requisite: Eng 133.**

Eng 137–Technical Writing 2(2-0-0): This course introduces students to the fundamentals of writing, designing and conveying technical information to different audiences. Students will learn about technical writing conventions, such as organization, style and tone and illustration and layout as they work through the writing process to produce a variety of common technical documents that they will encounter in their academic work. **Two 1-hour lectures per week. Pre-requisite: Eng 134.**

Eng 138–Fundamentals of Speech Communication 2(2-0-0): A study of communication theories as applied to speech: practical communicative experiences ranging from interpersonal communication and small-group process through problem identification and solution in discussion, to informative and persuasive speaking in standard speaker-audience situations. **One 2-hours lectures per week. Co-requisite: Eng 134.**

Mgt 292–Management Fundamentals & Skill 3(3-0-0): The course covers Management fundamentals & Skill, such as, Global Management - Change and Innovation - Appendix: Managing Entrepreneurial Ventures - Decision Making - Strategic Management - Module Planning Tools and Techniques - In class discussion: Ethics Dilemma - Operations Management - Marketing Management - E Business - Marketing Plan - Human Resource Management - Team Building - Foundations of Individual Behavior - Communication. **Three 1-hour lectures per week. Prerequisite (s): None.**

SSC 101- Creed and Doctrines 2(2-0-0): Creed: definition, importance, sources, characteristics, study methodology, pillars of faith, influence of creed on individuals and society, belief nullifiers, thought constraints, study of some contemporary doctrines: secularism, Satan worshipers, Baha'ism, Zionism, Misoneism, Christian fundamentalism. Student is required to memorize part of the holy Quran. **One 2 -hours lectures per week. Prerequisite(s): None.**

SSC 102 Islamic Culture 2(2-0-0): Moderation, Islam globalism and human ties, discrimination and nationalism, Arabic as the medium of education and culture, science and religion, interfaith dialogue, Orientalism and Christianization, Colonialism, Westernization, modernity in literature, Globalization, Terrorism, Development of Moslem nations. **One 2-hours lectures per week. Prerequisite(s): None.**

SSC 103 Islamic Morals and Ethics 2(2-0-0): Ethics: its definition, importance, swearing, and stature in Islam. Characteristics of Islamic morals. Moral obligation, moral responsibility, and moral sanction. Pictures of the manners of the Prophet Mohammed, peace and blessings be upon him. Pictures of the morals of his companions. Ethics and ethics of the profession. The Kingdom of Saudi Arabia's efforts in the field of protecting integrity and combating professional corruption, while mentioning ethical applications from Saudi

professional systems. Introduction to the National Anti-Corruption Commission "integrity". The role of the National Anti-Corruption Commission "integrity" in protecting the integrity and combating professional corruption. **Prerequisite (s): None**

SSC 104 Studies in the Biography of the Prophet 2(2-0-0): The importance of studying the Prophet Mohammed's biography. A glimpse into Arab life before Islam: religious, moral, social, and political life. The scientific method in the study of the Prophet's biography. Stages of the Prophet's Biography and the values learned from them. The Characteristics of the Prophet. Prophetic merits: the characteristics of the Prophet, both moral and ethical. The role of the Kingdom of Saudi Arabia in serving the prophetic biography. The personal efforts of some scholars of the Kingdom of Saudi Arabia to defend the Sunnah of the Prophet. **Prerequisite(s): None**

SSC 105 Medical jurisprudence 2(2-0-0): Medical jurisprudence. Treatment in Islamic law. Prophetic Medicine: preventive commandments, and treatment models. Examples of the scientific miracle of prophetic medicine. Legitimate Ruqyah and its evidence. Provisions of acts of worship related to the patient and the medical practitioner. Authorization and medical responsibility. Responsibility for a medical error. Applications of legal rules and intentions on medical provisions. Examples of contemporary medical issues: plastic surgery, fertilization outside the body, birth control and its regulation, milk bank, sperm freezing, miscarriage, gender determination, HIV/AIDS, organ and cell transplantation, resuscitation devices, and weight loss. **Prerequisite(s): None**

SSC 106 Economics & Politics in Islam 2(2-0-0): Political system: definition, and characteristics. Characteristics of the Islamic political system. The pillars of the state: the nation, and society. Manifestations of application of the political system in the Kingdom of Saudi Arabia. The Islamic economic system: definition, origin and development, importance, basics, and the characteristics of the economic system in Islam. Contemporary economic systems. Economic globalization. Property in Islam. Areas of intellectual property. Legitimate methods of ownership. Islam and economic freedom. Socioeconomic solidarity. **Prerequisite(s): None**

SSC 107 Islamic Social & Family Behavior 2(2-0-0): The social system in Islam. Social security and its role in preserving society. The importance of the family in Islam. Family protection factors in Islam. The role of the family in achieving community security. The response to the most prominent suspicions raised about the family. The most important social problems and ways to prevent. A study of some contemporary issues in the social system. Development and its impact on social renaissance. The relationship between the individual and society in Islam and positive systems. Study of contemporary issues related to women. The role of women towards their societies. The psychological characteristics of men and women, and their effect on family coexistence. **Prerequisite(s): None**

SSC 108 Management & Entrepreneurship 2(2-0-0):In the first part of this course, students from various disciplines will get acquainted with the most important basic concepts related to management and administrative decision, in addition to the most important traditional administrative functions of planning, organizing, directing and controlling, as well as what the knowledge and capabilities required by modern and future management come in the forefront of, Likewise leadership, participatory management, posterior leadership, technology management. In the other part of this course, students will have a solid foundation on the concept of entrepreneurship, its strategies, and its role in developing the national economy through small-scale projects. In this part, students will learn how to discover opportunities, understand, evaluate, and then transform them into sustainable business. Each student will also be able to learn the features and characteristics of entrepreneurs and the difficulties associated with entrepreneurship. **Prerequisite(s): None**

SSC 109 Health & Fitness 2(2-0-0): What is health? Physical fitness. Textures. Healthy nutrition. Weight control. Infectious and non-infectious diseases. Smoking. Drug. First aid. Car Accidents. Psychological stress. **Prerequisite(s): None**

SSC 110 Research Skills Research 2(2-0-0): concept, goals, fields, types, and steps. Research Methods: Descriptive Approach, Experimental Approach, and Historical Approach. Elements of a scientific research plan: Introduction, its problem; Its goals, importance, assumptions, and questions. Review of previous studies: How to critically analyze previous studies. Research hypotheses: definition, types, and formulation. References: books, periodicals, scientific theses, bulletins, and manuscripts. How to obtain information from global databases, and the skills of using the library electronically. Methods for writing references and quotations. Samples: their types and methods of selection. Research tools: (questionnaire - interview - observation - tests and measurements) and checking their suitability for the application. Scientific writing for research (abstract in Arabic and foreign languages - introduction - discussion - conclusion). Research ethics: Scientific honesty in quoting and avoiding scientific plagiarism. **Prerequisite(s): None**

SSC 111 Volunteer Work 2(2-0-0): The concept of volunteering from a social perspective. The importance, fields, and sources of volunteer work. Voluntary work in Islam. Volunteering in international and Arabic legislations. Theoretical foundations for volunteer efforts. Obstacles to volunteer, with a statement of volunteering culture and the ethics of volunteering in Saudi society. Management and organizations of volunteer work (administrative organization of charitable societies and social institutions in the Kingdom of Saudi Arabia). Evaluating the reality of volunteer work in society, with an indication of the relationship between civil and governmental social bodies. Voluntary work and its relationship to community security. Examples of voluntary work organizations at the Arabic level in general and the Kingdom of Saudi Arabia in particular. Voluntary field exercise for four weeks. Reviewing and evaluating the student's voluntary experience. **Prerequisite(s): None**

SSC 112 Medicine: Type and use 2(2-0-0): The main objective of this course is to introduce students to medicine and its various types and forms. This course also aims to provide the student with some special skills for optimal interaction with some common types of drugs such as antibiotics and medications in some famous physiological situations such as pregnancy, lactation, and some chronic diseases. This approach deals with describing known drug interactions, especially when using medicines with some types of foods, herbs, and nutritional supplements. **Prerequisite(s): None**

SSC 113 Human Rights in Islam 2(2-0-0): Human rights: definition and importance. The basic premises of human rights. Principles of human rights in Islam, philosophy, and thought. The history of human rights. The Universal Declaration of Human Rights: legal value and criticism. Islamic Declaration of Human Rights, the Kingdom of Saudi Arabia's concern for human rights. The legal framework for human rights in the Kingdom. Basic human rights: the right to life, the right to justice, the right to freedom, the right to religion, and the right to work. **Prerequisite(s): None**

SSC 114 Food and Nutrition 2(2-0-0): Introduction to food science and nutrition. Food and nutritional terminologies. The global food security problem. Fields of the food industry in the Kingdom. Main food groups (dairy - meat - vegetables and fruits - grains). Nutrients (food ingredients): moisture, carbohydrates (starch) sugars, dietary fiber, proteins, oils and fats, vitamins, and minerals. Food additive. Food corruption, and the authorities concerned with food control in the Kingdom. Methods of food preservation: drying, packaging, cooling, and freezing. Nutrition and its importance for the human body. Food physiology. Daily needs of nutrients. Nutrition and general health of the body. Nutritional status sections. An example of obese malnutrition diseases. Dietary energy, production, and use in the body - the body's energy needs. **Prerequisite(s): None**

Deic 317-Islamic Morals and Ethics 2(2-0-0): Morals and Ethics: definition and foundations, characteristics, study of model samples of the Prophets' morals and ethics, tools of moral/ethical education in Islam. Concept of profession and its importance in human life, constituents of professional morals/ethics and its constraints, model samples of professional morals/ethics in Islam. Student is required to memorize part of the holy Quran. **One 2-hours lectures per week. Prerequisite(s): None**

Deic 318-Economic System in Islam 2(2-0-0): Islamic Economy: (its nature and principles, development, and characteristics), the economic problem and how to face it, contemporary economic systems (capitalism, socialism), economic globalism, World Bank and its goals, World Trade Organization and its goals, ownership in Islam: definition, types, constraints. Islam and economic freedom, Production, distribution, expenditure, economic policies in contracts and transactions. Student is required to memorize part of the holy Quran. **One 2-hours lectures per week. Prerequisite(s): None.**

Deic 401- Islamic Social System 2(2-0-0): Society: definition, building blocks of society in Islam, Islamic society attributes, Family in Islam: definition, status, importance, building blocks, marriage and its purposes, spouses' rights, parents, siblings, and relatives' rights, women's status and rights in Islam, Family controversial issues about family system in Islam and responding to those issues (polygamy, inheritance, veil, divorce, etc.). Family problems and remedies (women's work, alimony, stewardship, etc.). Student is required to memorize part of the holy Quran. **One 2-hours lectures per week. Prerequisite(s): None.**
